

Cross the Gap Ready for a little Tech Challenge fun? Let's cross the gap!

Created June 2021

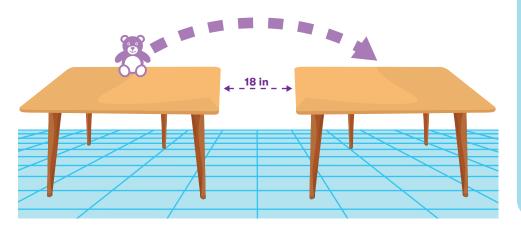

How would you cross a ravine? Design and build something that will get a small item across an 18-inch gap. No tape or glue allowed.

You will need some building materials and connectors. Use what you have and be creative!

Ready, set, build!

- 1. Create an 18-inch gap between two chairs, two boxes, or two tables.
- 2. Choose a small item and brainstorm how you can get it across.
- 3. Design and build a device that will bring your small item to the other side ... no glue or tape allowed.
- 4. Build and test again and again until you've met the challenge!

Bonus challenges

- Make the gap wider. Can you still cross it?
- Find more items or a heavier item to deliver. Can you get the new item(s) across the gap?
- See how many times in a row you can get your item across the gap. What's your record?
- Make it mobile! Create a delivery device that you can move from one spot to another.

Questions to ask yourself:

- If you could use any material, what would you choose? Why?
- If you tried different items, which were easier and why?
