

PART 2

Be a Science Sleuth Handout

Name(s):

Date:

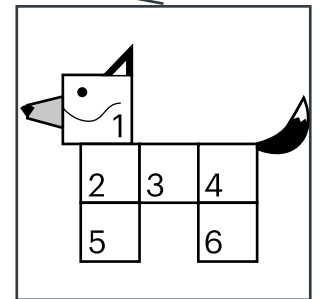

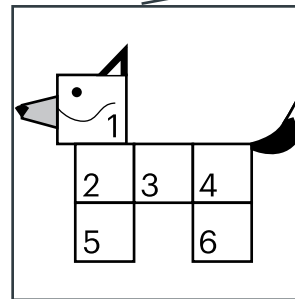

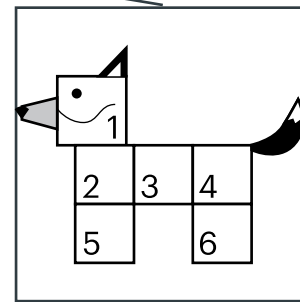

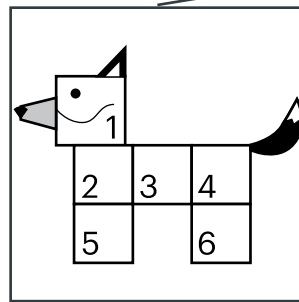

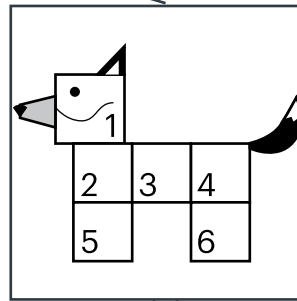

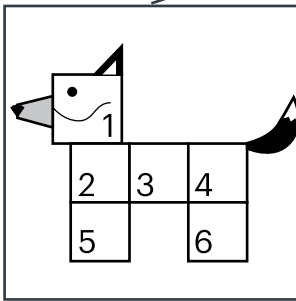

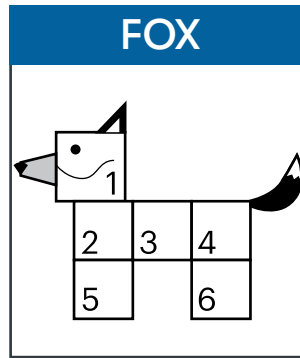

Directions: Exchange your cut-out puzzle squares with another pair. Use their puzzle squares to re-create their original tree on this page.

Tips:

- Look for patterns in the puzzle squares before you start building the tree.
- Try labeling all the branches in pencil before you start coloring, in case you want to make changes.

Reflect:

- Are there any characteristics that are found in more of the animals?
- Are there any similarities between the species that can help you group the populations together?

Puzzle Squares

Rearrange the other pair's Puzzle Squares here. Work backwards to try to re-create the original tree.
